Not simulated clients (Protocol mismatch)

+

Click here to expand

- (1) Clients that do not support Forward Secrecy (FS) are excluded when determining support for it.
- $(2) \ No \ support \ for \ virtual \ SSL \ hosting \ (SNI). \ Connects \ to \ the \ default \ site \ if \ the \ server \ uses \ SNI.$
- (3) Only first connection attempt simulated. Browsers sometimes retry with a lower protocol version.
- (R) Denotes a reference browser or client, with which we expect better effective security.
- (All) We use defaults, but some platforms do not use their best protocols and features (e.g., Java 6 & 7, older IE).

(All) Certificate trust is not checked in handshake simulation, we only perform TLS handshake.

Protocol Details

Secure Renegotiation	Supported
Secure Client-Initiated Renegotiation	No
Insecure Client-Initiated Renegotiation	No
BEAST attack	Mitigated server-side (more info)
POODLE (SSLv3)	No, SSL 3 not supported (more info)
POODLE (TLS)	No (more info)
Zombie POODLE	No (more info) TLS 1.2: 0xc013
GOLDENDOODLE	No (more info) TLS 1.2: 0xc013
OpenSSL 0-Length	No (more info) TLS 1.2: 0xc013
Sleeping POODLE	No (more info) TLS 1.2: 0xc013
Downgrade attack prevention	Unknown (requires support for at least two protocols, excl. SSL2)
SSL/TLS compression	No
RC4	No
Heartbeat (extension)	No
Heartbleed (vulnerability)	No (more info)
Ticketbleed (vulnerability)	No (more info)
OpenSSL CCS vuln. (CVE-2014-0224)	No (more info)

CVE-2016-	adding Oracle vuln. 2107)	No (more info)	
ROBOT (vu	Inerability)	No (more info)	
orward Se	ecrecy	Yes (with most browsers) ROBUST (more info)	
ALPN		No	
IPN		No	
Session resumption (caching)		No (IDs assigned but not accepted)	
Session resumption (tickets)		No	
OCSP stapl	ling	No	
Strict Trans	sport Security (HSTS)	Unknown (failed HTTP request?)	
ISTS Prelo	ading	Not in: Chrome Edge Firefox IE	
Public Key	Pinning (HPKP)	Unknown (failed HTTP request?)	
Public Key Pinning Report-Only		Unknown (failed HTTP request?)	
ublic Key	Pinning (Static)	No (more info)	
ong hands	shake intolerance	No	
LS extens	ion intolerance	No	
TLS version intolerance		No	
ncorrect SI	NI alerts	No	
Jses comm	non DH primes	No, DHE suites not supported	
OH public s	server param (Ys) reuse	No, DHE suites not supported	
CDH publi	ic server param reuse	No	
Supported	Named Groups	x25519, secp256r1, secp384r1 (server preferred order)	
SSL 2 handshake compatibility		Yes	
	HTTP Requests		•
	1 https://euw1-device-clo	oudgateway.iot.i.tplinknbu.com/ (Request failed)	
	Miscellaneous		
	Test date	Sun, 16 Jun 2024 16:21:51 UTC	
	Test duration	108.344 seconds	
	HTTP status code	Request failed	
	HTTP server signature Server hostname	Unknown ec2-54-170-92-104.eu-west-1.compute.amazonaws.com	

Why is my certificate not trusted?

There are many reasons why a certificate may not be trusted. The exact problem is indicated on the report card in bright red. The problems fall into three categories:

- 1. Invalid certificate
- 2. Invalid configuration
- Unknown Certificate Authority

1. Invalid certificate

A certificate is invalid if:

- It is used before its activation date
- It is used after its expiry date
- Certificate hostnames don't match the site hostname
- It has been revoked
- It has insecure signature
- It has been blacklisted

2. Invalid configuration

In some cases, the certificate chain does not contain all the necessary certificates to connect the web server certificate to one of the root certificates in our trust store. Less commonly, one of the certificates in the chain (other than the web server certificate) will have expired, and that invalidates the entire chain.

3. Unknown Certificate Authority

In order for trust to be established, we must have the root certificate of the signing Certificate Authority in our trust store. SSL Labs does not maintain its own trust store; instead we use the store maintained by Mozilla.

If we mark a web site as not trusted, that means that the average web user's browser will not trust it either. For certain special groups of users, such web sites can still be secure. For example, if you can securely verify that a self-signed web site is operated by a person you trust, then you can trust that self-signed web site too. Or, if you work for an organisation that manages its own trust, and you have their own root certificate already embedded in your browser. Such special cases do not work for the general public, however, and this is what we indicate on our report card.

SSL Server Test: euw1-device-cloudgateway.iot.i.tplin...

4. Interoperability issues

In some rare cases trust cannot be established because of interoperability issues between our code and the code or configuration running on the server. We manually review such cases, but if you encounter such an issue please feel free to contact us. Such problems are very difficult to troubleshoot and you may be able to provide us with information that might help us determine the root cause.
